

New artist list from the point of view of participation in the fair

Entry date: 10/12/2022

We have identified a group of 623 artists in our database who have more than 10 entries, with over 60% of the entries relating to art fairs. The proportion of data records related to trade fairs in the entire database is 38%. The phenomenon of a disproportionate reference to trade fairs was noticed, for example in the case of Markus Amm, 85% of his 20 entries are related to trade fairs. In addition to participating in trade fairs, we have included Markus Amm in the collection of contemporary art from the Federal Republic of Germany, the Daimler Art Collection and with an exhibition in the art association GAK Society for Contemporary Art Bremen. We became aware of Markus Amm because he is represented by four galleries at Frieze London 2022.

The group list of artists presented here is professional and very diverse, also and precisely because it partly points beyond the typical museum canon.

The first value after the artist name describes the presence value in public, the second counts the entries related to art fairs and the third value explains the percentage. A minimum of 11 entries was required. Listed here are artists with a share of 75% or more in relation to the trade fair context.
